The report will be made public following USGS regional approval. That should be before the end of September.

Yes, it is correct that we will be applying for MDE permits prior to any placement of material.

Tim,
I saw you calling but I was on the land line on another call. Thanks for the update. When is the report going to made "public" for our review? I am of the understanding that you will be applying for MDE permits before any placement so they can establish parameters for you to operate under.
Is this still the case?

Tim. M. Townes

Tim,
I called and left a message on your cell phone this afternoon. I wanted to give you an update on Pearce Creek and inform you of the work that is currently being done in the disposal area. We are currently clearing an area for a geophysical survey. The survey will be used to confirm data the is interpolated from borings that we have done in the past. This data will be used when considering any engineering measures that need to be done in the future.

The USGS report is now out for peer review and then will go to editorial review after comments. We expect that this will be completed in 6 weeks. Following the completion of the review, the Maryland Department of the Environment (MDE) will then review the report. MDE will then make the determination what measures the USACE needs to take to operate the area in an environmentally safe manner. Until MDE approves the use of the site we (USACE) will not place material or operate in the disposal area for any reason other than data collection.

Please give me a call if you have any questions. And let me know if you would like me to come and meet with your community.

I hope all is well.
Talk to you soon
Tim
